NIAGARA® POWER ONE™ PRESSURE-ASSIST TOILET USES JUST 1.0 GPF

Cedar Knolls, NJ – October 2009 – The Power One pressure-assist toilet is a part of Niagara Conservation's versatile offering of toilets that meet both stringent EPA Water Sense® criteria and high-efficiency toilet (HET) rebate standards. As a leader in the plumbing industry for more than 30 years, Niagara designed the Power One with a rating of just 1.0 gallons per flush (GPF), offering the lowest pressure-assist water use on the market.

Replacing an old, inefficient toilet with a Power One HET offers considerable savings. Compared to the average use of older 3.5 GPF toilets, a Power One can save up to 18,000 gallons of water per year. The Niagara Power One uses Sloan's Flushmate® pressure-assist flush system, resulting in a quieter flush than other conventional, pressure-assist toilets, while producing a high-performance, clog-free, one-time flush that clears all waste in the bowl. Because water is stored in a separate air-pressurized vessel inside the tank between flushes, the Power One tank is sweat-free. Power One also has a large 10.75" x 20.75" footprint which is ideal for retrofits or remodels as it covers unsightly floor exposure after installation.

With a history of more than 30 years of quality and innovation, Niagara Conservation has earned an unparalleled reputation as the premier manufacturer of high-efficiency water and energy conservation products. Niagara is the leading developer of complete conservation solutions for plumbing professionals, utility companies, government leaders, energy management officials and environmentally conscious consumers. Founder and president
