

UHET™

WATER-SAVING KITS

featuring

STEALTH®
TECHNOLOGY

Niagara Conservation's UHET Water-Saving Kits combine five high-efficiency products for a powerful water and energy saving solution that collectively delivers unrivaled savings.

Niagara Conservation Brings You the Best in Ultra-High-Efficient Technologies

Each UHET Water-Saving Kit provides unrivaled savings with NO change in consumer use or behavior.

Every UHET Water-Saving Kit comes with five of Niagara's best products. The first is a Niagara toilet featuring Stealth Technology - the world's *most efficient* toilet on the market. The next four products are your choice of the best showerheads and aerators we have to offer! These come packaged together in one high efficient collection. To make a complete kit, simply choose one Niagara toilet, one showerhead, two bathroom aerators, and one kitchen aerator.

SAVE MORE MONEY: Reduce Your Water Bill by Nearly **50%** Per Household* In One Year

With water conservation at a critical level, water-efficient products are a necessity. Instead of purchasing a standard high-efficiency toilet, take advantage of an advanced water-saving kit for about the same cost and start significantly reducing water usage. Also, flapperless toilets means less maintenance, no costly leaks, and less water wasted.

SAVE MORE GALLONS: Save Up To **40,000 Gallons** Of Water A Year.

One UHET kit can save nearly 40,000 gallons a year while the standard high-efficiency toilets only save 13,000 gallons ...*for about the same price*. Get the most out of your purchase and install the world's most efficient water-saving system. When you save more water, you're saving more money!

* PRE-MADE COMBOS:

Niagara has created pre-made showerhead/aerator combinations that are available for immediate order. These include one showerhead, one kitchen aerator, and one bathroom aerator. These fixtures were specifically hand-selected for their water-saving power and popular spray settings. When combined with a Stealth toilet, they will maximize your water conservation efforts.
