

NIAGARA
Green City™ **EDU**

WATER-SAVING PROGRAM FOR **SUSTAINABLE CAMPUSES**

PROGRAM DETAILS

NIAGARA GREEN CITY EDU is a water and energy conservation program specifically designed for universities where students are given an active role in water conservation.

BENEFITS

TOO GOOD TO BE TRUE? FAQ'S

Low flow toilets won't work on my property.

Our toilets are not "low flow". They are ultra-high-efficiency toilets that use patented Stealth Technology with a vacuum-assisted flush. Our toilets are MaP Premium certified at 800g; which means they can flush 1.7 lbs of waste. This power is comparable to a toilet that uses 2x more water.

Maintenance for these fixtures will cost more than maintenance for a conventional toilet.

Our toilets do not use a traditional flapper which is commonly found in conventional toilets. Flappers can wear out every 2 years and are prone to leaking which result in unwanted costs in water bills and materials.

It will be hard to find replacement parts for our products.

We back all of our products with unmatched warranty guarantees and our experienced customer service team is dedicated to assist with issues or concerns.

My maintenance crew doesn't have time to install these fixtures.

Your maintenance crews won't have to lift a finger. Our program offers optional turnkey installation provided by an experienced and certified third party team in the project area.

ABOUT OUR PRODUCTS

NIAGARA GREEN CITY EDU takes conservation to the next level with Niagara's UHET™ Water-Saving Kits featuring Stealth Technology.

These kits combine the patented, ultra-high-efficiency Stealth™ toilet line, a high-efficiency showerhead, and contemporary, pressure-compensating aerators for a powerful solution that collectively delivers unrivaled savings.

HOW IT WORKS

1. Free Water Audit (Optional)
2. Oversee Installation Of Niagara Conservation UHET Kits
3. Collect Water Use Data
4. Provide Water Use Data To Student Researchers
5. Widespread Water Conservation Awareness And Advocacy
6. Ongoing Care Through A Seven Year Revisit

CONTENTS

1 Toilet
1 Showerhead
1 Kitchen Aerator
2 Bathroom Aerators

CUSTOMIZABLE

Any products can be combined to create a kit

SAVE WATER

Saves up to **30K - 40K Gallons** per year per household

SAVE MONEY

Reduces water and energy bills up to **30-40%**

PERFORMANCE

Most products are WaterSense Certified

INDOOR WATER USE

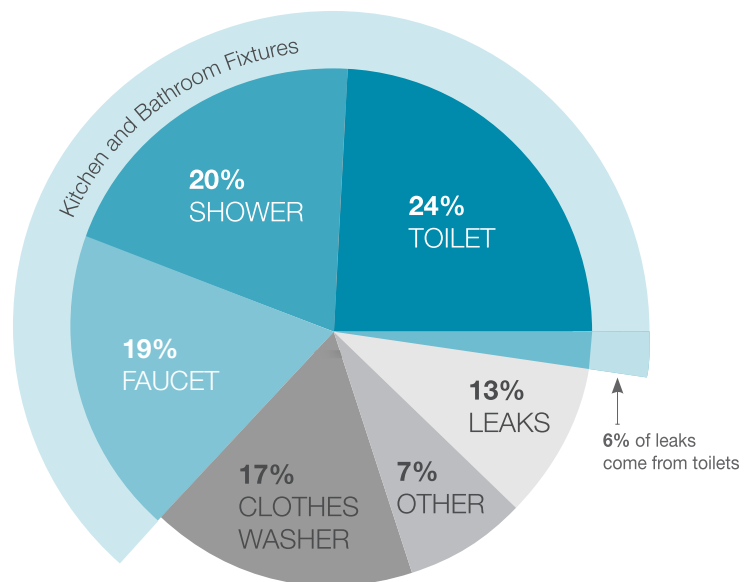

A typical bathroom accounts for over half of a household's¹ indoor water use.

Toilets account for nearly a quarter of that use. Niagara's UHET Water-Saving Kits, can save over **3X MORE** than a standard high-efficiency toilet.²

UHET Kit We Recommend for Universities:

- The Original Dual Flush Toilet - 0.5/0.95 GPF
- Earth® Showerhead - 1.25 GPM
- Dual Spray Kitchen Aerator³ - 1.5 GPM
- Dual Thread Bathroom Aerator³ - 0.5 GPM

While there are several products to choose from, this particular combination typically provides the best savings.

Did You Know?

A 1.6 GPF flapper toilet can easily turn into a 2.0 GPF.

A standard flapper is prone to leaking up to 200 gallons a day due to wafering and lack of support. That's enough to fill an average-sized swimming pool 4 times in one year!

¹. One household is the equivalent to a 3-person household, 5 flushes per person/per day, 10 minute shower per person/day, 5 minute faucet use per person/day. ². Annual water savings for UHET Water-Saving Kits based on a comparison to a 1.28 GPF toilet, 3-person household, 5 flushes per person/per day. ³. If applicable
