## NIAGARA CONSERVATION UNVEILS NEW TOILET THAT USES .5 GALLON

---

By Nigel F. Maynard

The Stealth Phantom by [Niagara Conservation](#) is an ultra-high-efficiency toilet that flushes with either .95 gallon of water or a stingy half-gallon.

Niagara calls it the most upscale ultra-high-efficiency toilet on the market. The Phantom features Niagara's patented Stealth technology in a luxurious lean silhouette.

The company says its products are "the most efficient toilets on the globe—working better and wasting nothing." Designed to save water and money, the two-piece unit offers a narrow, smooth tank with a skirted easy-to-clean silhouette and an elongated bowl. It also features an extended footprint design that easily covers the existing footprint of another toilet in a retrofit situation.
