

TEST YOUR WATER KNOWLEDGE!

What household products use the most water?
Only 1% of the world's water is fit for human consumption.

13% - LEAKS

Nearly 13% of a households' water consumption goes straight down the drain! Make sure you check your faucets, showers and toilets for leaks.

17% - WASHING MACHINES

Even high-efficiency rated washing machines can take a toll on water bills and electricity bills! Be sure to load up the machine and adjust the water level based on load size to save water.

19% - FAUCETS

19% of household water is consumed through the faucets. Helpful tip: turn off the water between hand washing dishes and rinsing them or lather up with soap before rinsing.

20% - SHOWERS

Your shower uses 20% of household water consumption - make sure yours showerhead is water-efficient. New technology has transformed "low-flow" showerheads, allowing for maximum water-savings with a powerful flow.

24% - TOILETS

Nearly 25 % of household water consumption goes down the toilet. New technology has emerged, and government regulations have increased in recent years as more and more new construction projects pop up over the country. Now, with WaterSense certified products, property owners can save money and water with products like Niagara Conservation toilets.
